

ADVANCED APPOINTMENT SCHEDULER

With sophisticated filtering and selection, all scheduling can be done in one book, and it can be configured for each user. The integrated reminder system can call, e-mail, or text message patients who can then send an e-mail or voice message back to the software.

BUILT IN HL7 INTERFACE

With this interface, the system can receive and transmit information to EMR, EHR, and similar systems.

INTEGRATED INTERNET ACCESS

The software can be accessed from any computer anywhere on the Internet that is registered to the Doctor's office for access.

INTEGRATED BACKUP

The system can be set up for multiple on site backups, and secured automatic remote backup through the Internet.

ELECTRONIC BILLING AND AUTOMATIC REMITTANCE POSTING

All insurance electronic claims can be billed through the Internet using claim processing centers. These same claim processing centers provide HIPAA compliant Electronic Remittance Advice (ERA) files, which can be downloaded into the software and automatically post insurance payments. The same technology can be used for sending patient statements, and patients can make payments on line.

TRUE WINDOWS APPLICATION

Designed from the ground up using the latest Microsoft .NET Framework technology, it runs with Microsoft XP or VISTA.

UNLIMITED DATA STORAGE

Data storage is only limited by disk space, allowing reports and financial analysis to be run at any time. File duplicates can be cleaned up and removed at will.

SIMPLE USER INTERFACE

The system features high technology, but still maintains our trademark user interface. It can be run without a mouse and has simple screens that are easy to navigate.

PAPERLESS OFFICE

All reports can be previewed on the screen, and additional reports can be created through query routines. The System is integrated with Microsoft Office so that data can be exported to Word or Excel to create custom reports and letters. Additionally, documents such as drivers licenses and insurance cards can be scanned directly into the patient file thereby eliminating the need for paper copies. With this feature and Internet claim and statement generation, your office can be virtually free of paper saving time and money.
